Directions on filling in the order sheet.

Label the diagrams with the text in the proper locations and then circle the corresponding numbers on the left and right sides to specify the vertical positions of that text. Even though it looks like there is plenty of room to have three rows of text, there isn't. Specify the color for the Op. (operator) & Text.

The engravable area is only so big so long words won't fit without some compressing. This can be done, but only up to a point. AVIONICS is acceptable because the bottom of the A slides under the top of the V and the I's are very narrow. however, ALTERNATOR would never fit and even ALTERN is compressed too much. Try to keep the text to 5 or 6 characters if possible.

Operator Colors - AML54's - White, Red, Green, Blue, Yellow & Black - AML51's White ONLY  
Text colors - Black, White, Red, Green, Blue, Yellow & Amber
